## IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently amended): A formulation comprising:

- (i) at least one organoalkoxysilane and/or at least one organoalkoxysiloxane; and
- (ii) at least one inorganic oxidic powder; and
- (iii), optionally, an organic or inorganic acid[[,]];

wherein

a content of the at least one inorganic oxidic powder component (ii) making up is from 5 to 50% by weight of the formulation, and

a viscosity of the formulation having a viscosity of is less than 1500 mPa·s, and a weight ratio of the at least one organoalkoxysilane and/or at least one organoalkoxysiloxane to the at least one inorganic oxidic powder is from 19:1 to 1:1.

Claim 2 (Currently amended): The formulation as claimed in claim 1, <u>further</u> comprising: a wetting assistant as <u>further component</u> (iv).

Claim 3 (Currently amended): The formulation as claimed in claim 1, <u>further</u> comprising a diluent or solvent-as <u>further component</u> (v).

Claim 4 (Currently amended): The formulation as claimed in claim 1, wherein the organoalkoxysilane of component (i) is of the general formula (I)  $R_a\text{-Si}(OR^1)_{4\text{-a}} \qquad \qquad (I),$ 

in which wherein

groups R are identical or different and R is independently a linear, cyclic, branched or substituted alkyl group having 1 to 18 carbon atoms or an alkenyl group having 2 to 8 carbon atoms or an aryl group or an alkoxy group or an acryloyl- or methacryloyloxyalkyl group or an epoxyalkyl group or a glycidyloxyalkyl group or an aminoalkyl group or a fluoroalkyl group or a mercaptoalkyl group or a silylated alkylsulfanealkyl group or a thiocyanatoalkyl group or an isocyanatoalkyl group,

R<sup>1</sup> is a linear, branched or cyclic alkyl group having 1 to 6 carbon atoms, and a is 1 or 2.

Claim 5 (Currently amended): The formulation as claimed in, claim 1 wherein the organoalkoxysiloxane of component (i) is of the general formula (II)

$$R^{2}R_{x}^{3}(R^{4}-O)_{y}SiO_{\frac{(3-x-y)}{2}}(II),$$

## in which wherein

groups R<sup>2</sup> are identical or different and R<sup>2</sup> is independently a linear, cyclic, branched or substituted alkyl group having 1 to 18 carbon atoms, an alkenyl group having 2 to 8 carbon atoms, an aryl group, an acryloyl- or methacryloyloxyalkyl group, a glycidyloxyalkyl group, an epoxyalkyl group, a fluoroalkyl group, an aminoalkyl group, a silylated aminoalkyl group, a ureidoalkyl group, a mercaptoalkyl group, a silylated alkylsulfane group, a thiocyanatoalkyl group, an isocyanatoalkyl group or an alkoxy group,

 $R^3$  is a linear, cyclic, branched or substituted alkyl group having 1 to 18 carbon atoms,  $R^4$  is a linear, cyclic or branched alkyl group having 1 to 6 carbon atoms,

x is 0 or 1 or 2, and

y is 0 or 1 or 2,

with the proviso that (x+y) < 3.

Claim 6 (Currently amended): The formulation as claimed in claim 1, wherein the at least one inorganic oxidic powder (ii) comprises comprising a nanoscale powder (ii) having an average particle size (d<sub>50</sub>) of less than 1200 nm.

Claim 7 (Currently amended): The formulation as claimed in claim 1, wherein the at least one inorganic oxidic powder (ii) comprises comprising a powder (ii) selected from the group consisting of silicon oxides, aluminum oxides, and transition metal oxides.

Claim 8 (Currently amended): The formulation as claimed in claim 1, <u>further</u> comprising as <u>further components</u> at least one reaction product of <u>components</u> (i) <u>the</u> at least one inorganic oxidic powder and <u>the at least one organoalkoxysilane and/or at least one organoalkoxysiloxane</u>.

Claim 9 (Currently amended): The formulation as claimed in claim 1, wherein with a solids content is from 40 of up to 90% by weight, based on the total weight of the formulation, whose respective components total a maximum of 100% by weight.

Claim 10 (Currently amended): The A process for preparing a formulation, as claimed in claim 1 comprising[[,]]:

- combining eomponents (i) at least one organoalkoxysilane and/or at least one organoalkoxysiloxane, (ii) at least one inorganic oxidic powder, and optionally a wetting agent component (iv),
- adding from 0.001 to < 0.8 mole of water per mole of Si in component (i) to the combination of (i), (ii) and optional (iv), together where appropriate optionally with a catalytic amount of an organic or inorganic acid in accordance with component (iii), and

Application No. 10/563,022 Reply to Office Action of October 1, 2009

- intensely dispersing the mixture,

wherein

the formulation comprises:

(i) the at least one organoalkoxysilane and/or the at least one organoalkoxysiloxane;

- (ii) the at least one inorganic oxidic powder;
- (iii), optionally, an organic or inorganic acid,
- (iv), optionally, the wetting agent,

a content of the at least one inorganic oxidic powder (ii) is from 5 to 50% by weight of the formulation, and

a viscosity of the formulation is less than 1500 mPa·s.

Claim 11(Currently amended): The process as claimed in claim 10,

wherein the <u>at least one inorganic oxidic powder (ii) comprises</u> at least one nanoscale inorganic powder (ii) is selected from the group consisting of silicas, aluminas, <del>and</del> transition metal oxides and mixtures thereof.

Claim 12 (Previously presented): The process as claimed in claim 10,

wherein the at least one organoalkoxysilane is selected from the group consisting of methyltriethoxysilane, methyltrimethoxysilane, n-propyl-trimethoxysilane, n-propyltriethoxysilane, vinyltriethoxysilane, vinyltrimethoxysilane, 3-methacryloxypropyltrimethoxysilane, 3-glycidyloxypropyltrimethoxysilane, 3-glycidyloxypropyltrimethoxysilane, 3-glycidyloxypropyltrimethoxysilane, tridecafluoro-1,1,2,2-tetrahydrooctyltrimethoxysilane, tridecafluoro-1,1,2,2-tetrahydrooctyltrimethoxysilane, N-(n-butyl)-3-aminopropyltrimethoxysilane, N-(2-aminoethyl)-3-aminopropyltrimethoxysilane, N-(1-aminopropyltrimethoxysilane, N-(1-

(2-aminoethyl)-3-aminopropylmethyldimethoxysilane, bis(3-trimethoxysilylpropyl)amine, 3-mercapto-propyltrimethoxysilane and mixtures thereof.

wherein the at least one organoalkoxysilane and/or at least one organoalkoxysiloxane is selected from the group consisting of at least one organoalkoxysiloxane organoalkoxysiloxane of the general formula (II), or a mixture of organoalkoxysiloxanes of the

general formula II, [[or]] and a mixture of at least one organoalkoxysilane of the general

Claim 13 (Currently amended): The process as claimed in claim 10,

formula I and organoalkoxysiloxanes of the general formula II is used.

Claim 14(Currently amended): The process as claimed in claim 10,

wherein from 0.05 to 0.5 mole of water is used added per mole of Si in the (i) at least one organoalkoxysilane and/or at least one organoalkoxysiloxane.

Claim 15 (Currently amended): The process as claimed in claim 10,

wherein as

a catalytic amount of organic or inorganic acid is added,

the added organic or inorganic acid is selected from the group consisting of acetic acid, acrylic acid [[or]] and maleic acid, and is used in

an amount of <u>the added acid is</u> from 10 to 3500 ppm by weight, the amount of acid being based on the amount of emponent (i) used (i) <u>the at least one organoalkoxysilane</u> and/or at least one organoalkoxysiloxane in the formulation.

Claim 16 (Currently amended): The process as claimed in claim 10,

wherein the components used are dispersed at a temperature for dispersing the liquid is of from 0 to 80 °C.

Claim 17 (Currently amended): The process as claimed in claim 10, wherein the components used are dispersed a time for dispersing the liquid is from 10 to 60 minutes.

Claim 18 (Currently amended): The process as claimed in claim 10, <u>further</u> comprising: aftertreating the intensely dispersed mixture,

wherein the dispersion or formulation thus obtained is aftertreated aftertreatment comprises stirring for a period of from 1 to 8 hours at a temperature of from 30 to 80 °C with stirring.

Claim 19 (Currently amended): The process as claimed in claim 10, <u>further</u> <u>comprising:</u> adjusting <u>wherein</u> the formulation <u>is adjusted</u> to a pH of from 2 to 7 by adding [[an]] <u>the optional</u> organic or inorganic acid.

Claim 20 (Previously presented): A formulation obtained by the process as claimed in claim 10.

Claim 21 (Currently amended): A method, comprising adding to a composition or applying to a substrate The use of a the formulation as claimed in claim 1, wherein the method is for preparing a composition or forming a substrate for an application selected from the group of applications consisting of scratch resistance applications, for abrasion resistance applications, for corrosion protection applications, for easy-to-clean applications, for barrier

applications, in the electronics segment, for the surface treatment of circuit boards, as an insulating layer, as a release layer, for the coating of the surface of solar cells, as a glass fiber size, or for and homogeneous incorporation of nanoscale powders into systems of other kinds.

Claim 22 (Currently amended): The use of a A product prepared by a method comprising utilization of the formulation as claimed in claim 1, for producing plastics, adhesives, sealants, resin base materials, inks or paints wherein the product is a plastic, an adhesive, a sealant, a resin base material, an ink and a paint.

Claim 23 (Currently amended): The use of a A composition, comprising the formulation as claimed in claim 1, wherein the composition is one selected from the group consisting of as a constituent of resin based material materials, of plastics a plastic, of inks an ink, of paints a paint, of adhesives an adhesive or of sealants and a sealant.

Claims 24-25 (Canceled).
